Tim,

Our approval process for this kind of shielding is a) internal review and approval within RadCon, and b) approval by SCMB. Both of these were done for a previous, slightly different version of the shielding. Pavel Degtiarenko, who designed the original shielding, is of the opinion that the design difference is minor and that the current design is equally acceptable. Both I and Bob May concur that this does not need to go back through SCMB. Please consider this shielding design approved. It will be documented in our shielding database.

Hi Gents,

Attached is the version of the shielding wall that is currently being installed.
Can someone officially approve this?

Thanks,

Tim Whitlatch
